

U.S. Fish & Wildlife Service

Can I Download Images From Fish and Wildlife Service Web Sites?

Most of the images on our Web pages are in the "public domain," which means they have no copyright restrictions. If an image on one of our sites is not restricted and does not say it is copyrighted, then you can assume it is in the public domain. You may download and use these copyright-free images in your print and electronic publications. There is no fee and no need to get permission from the Service for using them. Images in the public domain may credit the artist or photographer, or identify the source (example: Credit: U.S. Fish and Wildlife Service, Robert Wilson). This does not mean the image is copyrighted. But please credit the artist or photographer and the U.S. Fish and Wildlife Service if at all possible. For a variety of downloadable images, please search our [National Image Library](#).

On rare occasions the Service's Web pages will include copyrighted images. The creator of those images has granted permission to the Service to use those images, but those copyrighted images are not automatically available for use by others. If you want to download and use copyrighted images, the photographer/artist - not the Fish and Wildlife Service - will have to grant you authorization. In many cases there may be a license fee associated with the use of those images. For information on copyright laws, please visit the [United States Copyright Office home page](#).

Some images, such as the Fish and Wildlife Service official logo, are restricted and may not be used on non-Service publications or Web sites without permission. Regulations governing the use of our official logo can be found on our [Privacy, Disclaimer, Copyrights and Logo Use page](#)

Please do not assume that every image on a printed Service publication is in the public domain. In many cases, the Service purchased the rights to use those photographs and drawings just for that publication. Reuse by others requires separate authorization from the photographer/artist before their copyrighted products can be scanned from a printed copy.

For information regarding this Web page, please [contact us](#) at **Contact@fws.gov**

Welcome to images.fws.gov

Welcome - to the U.S. Fish and Wildlife Service's online collection of public domain still photographs. The National Image Library contains still photo images of wildlife, plants,

National Wildlife Refuges and other scenics, as well as wildlife management work. You may search all the images through the National Image Library, or you may search by individual collection.

The Image Library is expanding to include images from collections in our various regions. The images have increased in file size, ranging from 150dpi to 300dpi. We hope you will find these improvements helpful. When using these images, please credit the photographer and the Fish and Wildlife Service. Ex. John Doe/USFWS. Search Suggestions: For historic refuge images use keyword "centennial".
